- Cognitive Behavioral Therapy for Insomnia (CBTi)
- Nutrition Consultation with Registered Dietician
- CPAP AutoPAP BiPAP ASV
- Mask Fitting Session for PAP therapy

The Colorado Sleep Institute is a truly comprehensive sleep disorders center where board-certified, fellowship-trained sleep physicians evaluate, diagnose and manage the full spectrum of sleep disorders including OSA, insomnia, RLS, parasomnias, narcolepsy, and circadian disorders. All diagnostic testing and treatments are provided in-house to increase continuity of care and improve clinical outcomes.

Insurance regulations for sleep diagnostic testing and treatments such as CPAP and oxygen have become more stringent. By first establishing care with our sleep specialists, we are able to obtain all necessary insurance authorizations and ensure proper access to care.

As such, all referred patients will first be evaluated by a sleep specialist and will be managed thereafter as medically indicated. All visit notes, labs, and study results will be consistently communicated to the referring practice and PCP.

Our full-time staff of registered sleep technologists meet with patients to closely manage PAP therapy. We also utilize wireless home PAP monitoring which will alert us if a patient is having problems. Currently, our PAP compliance is over 80% compared to the national average of 40%.

We are contracted with all major commercial insurance plans including Medicare and Medicaid (non-DME only).
